

**Job Title: Robotics Testing Engineer**

Location: Shenzhen / London / Hybrid

Company: *Robosloth Technologies Ltd*

About Us

Robosloth Technologies Ltd is a UK-based robotics startup developing adaptive crawling and climbing robots for industrial inspection and maintenance. We merge mechanical creativity with intelligent control systems to build robots capable of navigating and operating in complex environments.

You'll work closely with our Simulation & Control Engineer to bring virtual models to life — validating algorithms, improving performance, and shaping real-world robot behaviour.

Role Overview

We are looking for a *Robotics Testing Engineer* who thrives in hands-on experimentation and technical problem-solving. You'll lead testing and validation for robotic prototypes, ensuring system stability, precision, and safety.

This role bridges hardware and software — ideal for someone who enjoys working directly with robots, sensors, and control systems in a fast-paced R&D setting.

Responsibilities

- Plan, execute, and document robot prototype tests, including functional validation, control performance, and system reliability.
 - Collaborate closely with simulation and control engineers to implement “simulation-to-real” (sim2real) testing workflows.
 - Design and build testing setups, rigs, and data acquisition systems for mechanical and control evaluation.
 - Collect and analyse test data to diagnose performance issues and propose improvements.
 - Maintain test equipment and ensure repeatable, reliable testing procedures.
 - Produce detailed test reports, logs, and technical documentation.
-

Requirements

- Bachelor's degree or higher in Mechanical Engineering, Mechatronics, or Robotics.
 - Hands-on experience in building things and testing them.
 - Familiarity with ROS/ROS2, communication protocols (I2C, SPI), and sensor integration.
 - Comfortable with test instrumentation and data acquisition systems.
 - Strong analytical and problem-solving skills, with an eye for detail and precision.
 - Able to work independently and communicate effectively across mechanical and software teams.
-

Preferred (but not required)

- Experience with mobile robots, robotic arms, or bio-inspired robotics.
 - Exposure to real-time control systems (RTOS) or hardware-in-the-loop (HIL) testing.
 - Proficiency in Python or Bash scripting for test automation and data analysis.
 - Experience designing test rigs or experimental setups.
-

Personal Attributes

- Practical, hands-on, and methodical.
 - Calm and systematic when troubleshooting complex systems.
 - Collaborative mindset — eager to work side-by-side with control, mechanical, and software engineers.
-

What We Offer

- Early-stage ownership potential under the company's Equity Incentive Plan (EIP).
- Flexible, results-oriented work culture.
- Clear progression path toward Systems Integration or Field Validation Lead as the company grows.

机器人测试工程师 (Robotics Testing Engineer)

工作地点：深圳 / 伦敦 / 混合办公

公司名称：树懒科技

公司简介

树懒科技是一家来自英国的智能机器人初创公司，专注于研发自适应爬行与攀爬机器人，用于工业检测与维护。

我们结合机械结构创新与智能控制算法，打造可在复杂结构中自由行动的下一代机器人。

加入我们，你将与仿真与控制团队紧密合作，把虚拟模型变为真实机器的精准动作。

岗位职责

- 负责机器人原型的测试与验证工作，包括功能测试、控制验证及系统性能评估。
- 与仿真与控制工程师协作，执行从“仿真到实物” (sim2real) 的验证流程。
- 设计测试流程与实验台架，制定测试计划、测试脚本与数据采集方案。
- 分析机器人动作数据，识别性能瓶颈并协助优化控制算法与机械结构。
- 维护测试设备与仪器，确保测试结果的准确性与可复现性。
- 编写测试报告、问题记录与改进建议，为产品研发提供数据支撑。

任职要求

- 本科及以上学历，机械工程、机电一体化、控制工程、机器人学等相关专业。
 - 熟悉常用传感器 (IMU、力/力矩、视觉、里程计等) 及数据采集系统。
 - 具备机器人硬件调试经验，能独立进行焊接、组装与线束布线。
 - 能阅读并理解控制算法及通信接口 (ROS/ROS2、优先)。
 - 具备良好的逻辑分析能力与动手能力，对测试数据敏感。
 - 认真细致，注重安全、稳定与系统可靠性。
-

加分项（非必需）

- 有移动机器人、机械臂或仿生机器人测试经验。
 - 熟悉控制器调试与实时系统（RTOS）或硬件在环（HIL）测试。
 - 熟悉 Linux 环境及基础脚本编写（Python、Bash 等）。
 - 具备实验台架设计、传感数据融合或控制验证经验。
-

我们希望你是这样的人

- 喜欢“动手做”，有解决实际问题的能力与热情。
 - 乐于协作，与控制 and 机械团队一起调出完美的动作表现。
 - 在问题面前冷静、有条理，愿意持续迭代、打磨系统。
-

我们提供

- 公司早期股权激励计划（EIP），与团队共享成长成果。
- 与创始团队直接合作，参与核心机器人研发与性能优化。
- 灵活开放的工作氛围，强调结果与技术积累。
- 清晰成长路径：从测试工程师成长为系统集成或现场验证负责人
